

Object Oriented Programming

Assignment 9 - RPN Calculator - Model

Mr. D Bylsma
Chris
Adrian

1 Some Random Notes

- Use `super()` or `super(parameters...)` to call a parent constructor. All methods are inherited except constructors.
- Use `super.something()` to call a parent method
- Use `@Override` before a method that is supposed to override a parent method. This lets the compiler help you check for errors (eg: if you misspelled the method you're trying to override);
